SOFTWARE ENGINEERING PROJECT

ONLINE INTERNSHIP & PLACEMENT PORTAL

PART 3 | INDIVIDUAL TEST RESULTS & EVIDENCE REPORT

Team 9 • Testing owner: Yashas S

Report details

Field	Value
Assigned requirements	F-014, F-015, F-016, F-017, NF-002, NF-003, SR-002, SR-004
Test environment	Windows 11; Node.js v20.19.5; npm 10.8.2; MySQL Server 8.0.46; Chrome desktop
Application / database	http://localhost:3000 (local testing copy) / oipp_testing (isolated local database)
Testing branch / commit	test/OIPP-yashas-part3 / ae7929b (merged PR)
Base revision	514e631937ed809e0219f7cac390fd18323aa7e6
Report / evidence dates	Prepared 11 November 2026; F-014 and uptime evidence from 08 November 2026; recruiter UI finding shared 10 November 2026

Test result summary

Requirement	Status	Evidence / limitation
F-014 - Interview Question Bank	PASS - 9/9 manual scenarios	Nine browser screenshots included.
F-015 - Mock interviews	Backend automated tests passed; live DB / full UI flow not verified	Controlled test doubles; live persistence not demonstrated.
F-016 - Recruiter listings	Backend automated tests passed; UI validation blocked / not tested	Team reported recruiter login and listing-management UI is absent.
F-017 - Applicant management	Backend automated tests passed; UI validation blocked / not tested	Team reported applicant-management UI is absent.
NF-002 - Availability	PASS for recorded local sample	6/6 smoke checks; 12/12 HTTP 200 checks; 100% over nominal 2-minute sample.
NF-003 - Security review	PARTIAL	Hashing, redaction, .env ignore and production audit checked; transport / DB grants not verified.
SR-002 - RBAC	PASS within documented test scope	57/57 targeted tests; representative endpoint-role matrix.
SR-004 - Security events	PARTIAL - open finding	15/15 targeted tests; admin approval/rejection events missing; student event paths not all independently tested.

Purpose and scope

This individual evidence pack is for Vismaya to incorporate into the consolidated System Validation Report. It complements, but does not replace, the separate Branch Coverage Report and the team consolidated RTM.

F-014 - Interview Question Bank: test execution summary

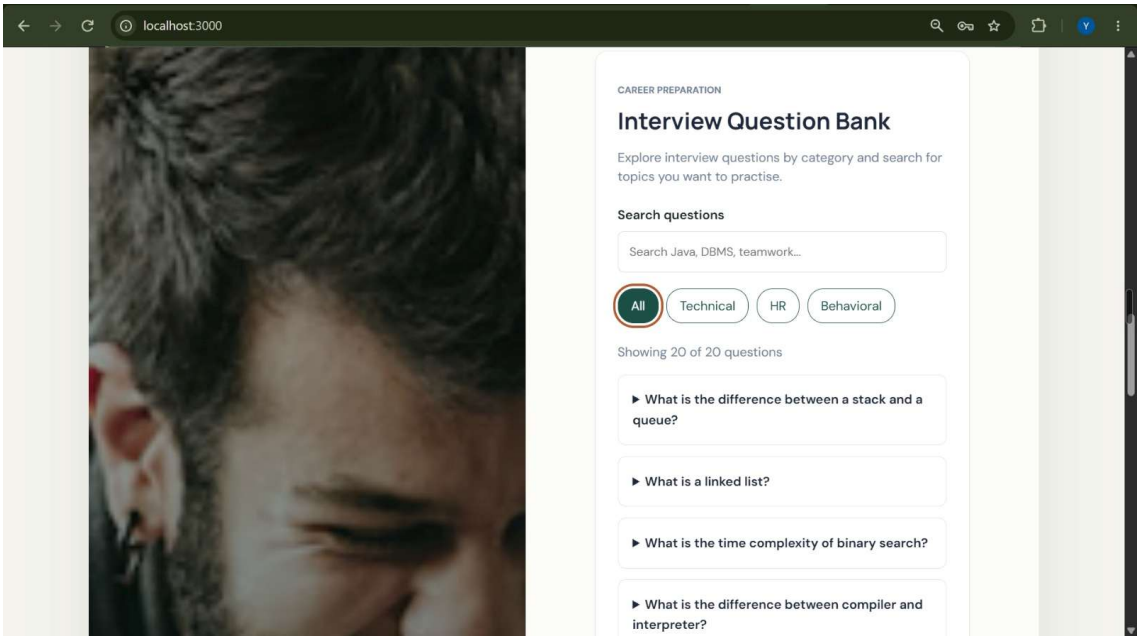

The student QA account signed in successfully to the isolated local testing environment. The Question Bank initially displayed 20 of 20 questions. The tester checked category filters, keyword search, combined filtering, empty results and reset behaviour.

Test ID	Action	Observed result	Status
F014-01	Select All	20 of 20 questions	PASS
F014-02	Select Technical	12 of 20 questions	PASS
F014-03	Select HR	4 of 20 questions	PASS
F014-04	Select Behavioral	4 of 20 questions	PASS
F014-05	Search DBMS	2 matching questions	PASS
F014-06	Search binary	1 matching question	PASS
F014-07	Behavioral + teamwork	1 matching question	PASS
F014-08	Search xyz-no-match-999	0 results; empty message visible	PASS
F014-09	Clear search; select All	20 of 20 restored	PASS

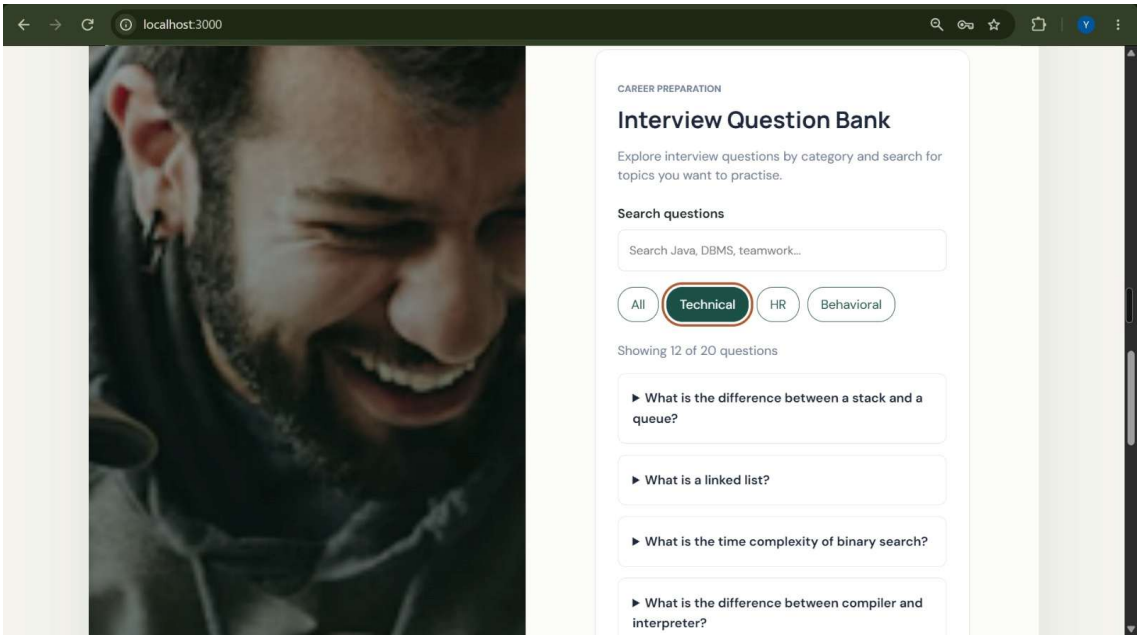

F-014 outcome

All nine manual scenarios were reported working as expected by the tester. The following pages contain the nine corresponding browser screenshots.

F-014 - Interview Question Bank: manual browser evidence

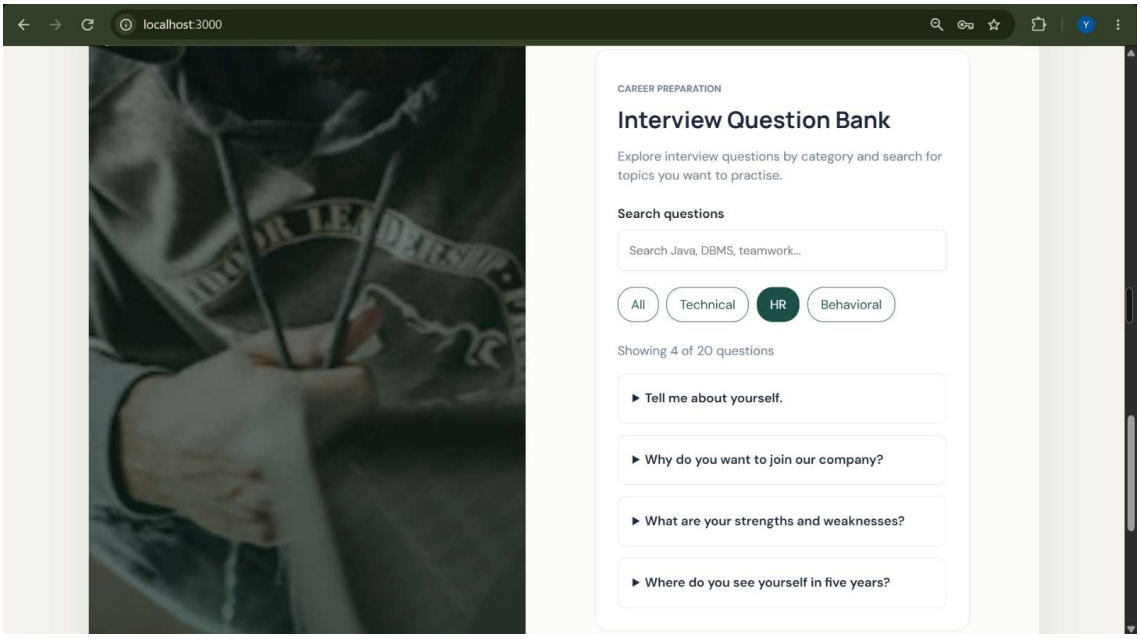

Evidence F014-01. All category selected; the Question Bank displays 20 of 20 questions.

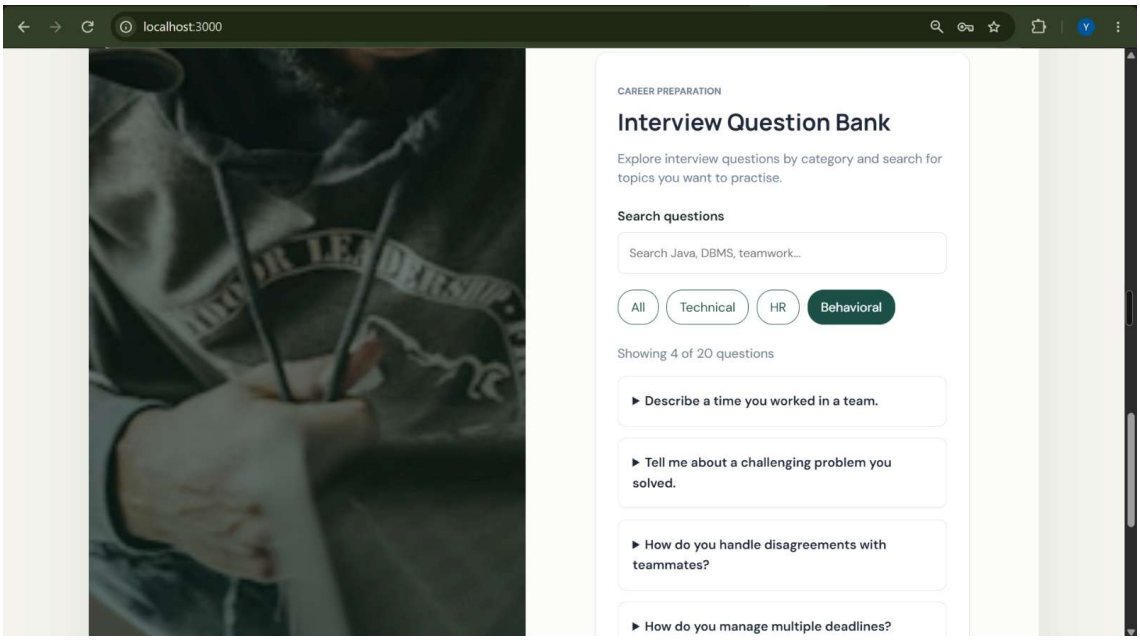

Evidence F014-02. Technical category selected; 12 of 20 questions displayed.

F-014 - Interview Question Bank: manual browser evidence

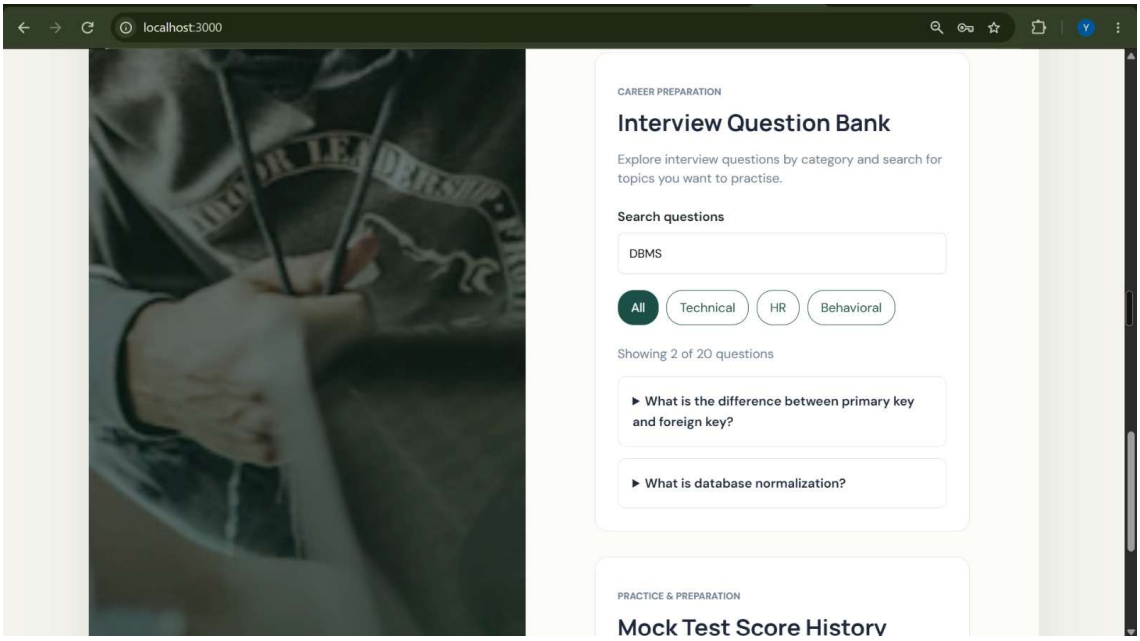

Evidence F014-03. HR category selected; 4 of 20 questions displayed.

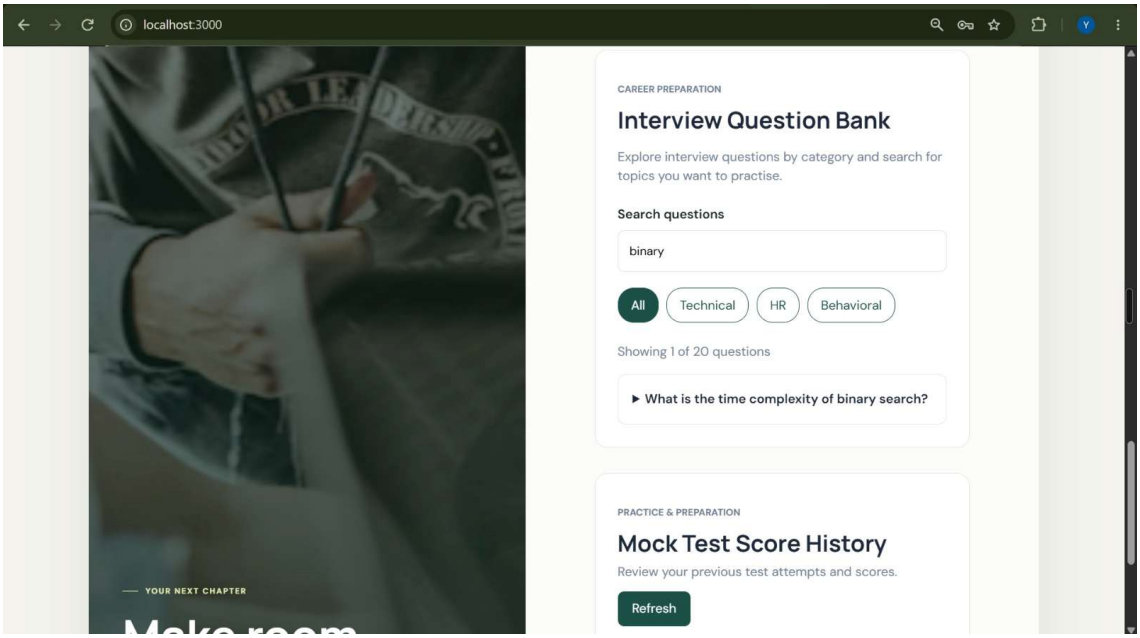

Evidence F014-04. Behavioral category selected; 4 of 20 questions displayed.

F-014 - Interview Question Bank: manual browser evidence

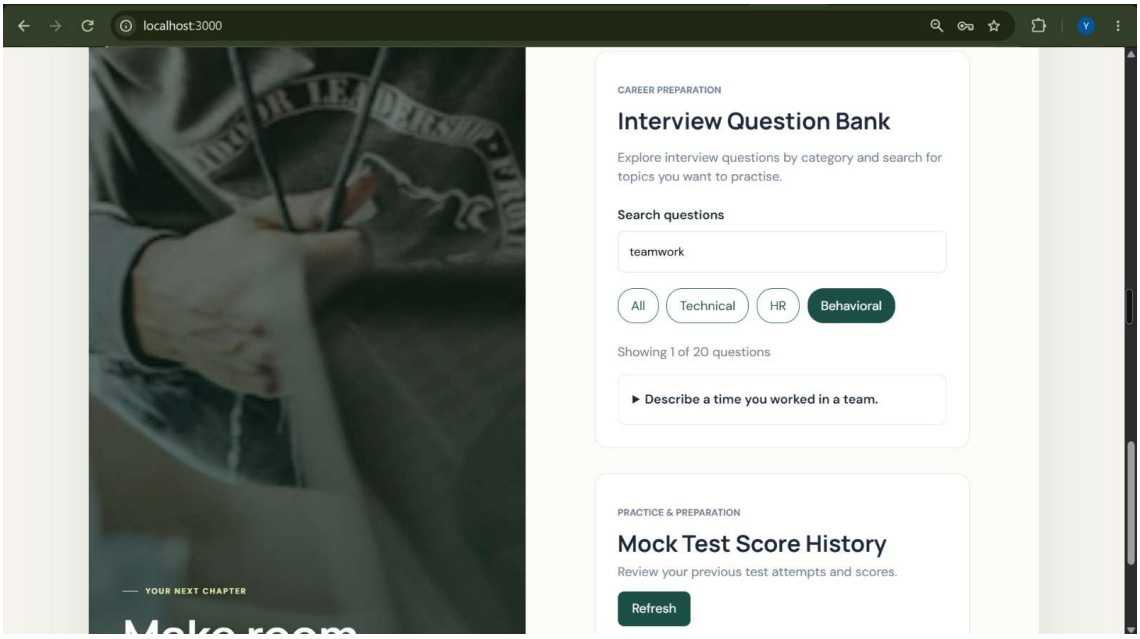

Evidence F014-05. Search term “DBMS”; two matching questions displayed.

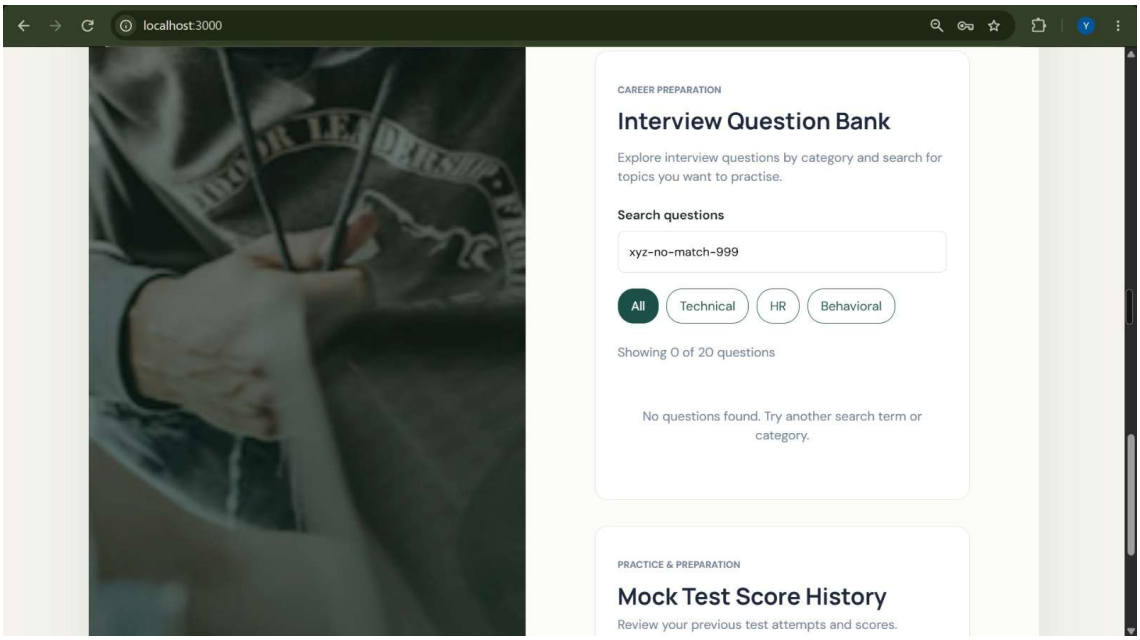

Evidence F014-06. Search term “binary”; one matching question displayed.

F-014 - Interview Question Bank: manual browser evidence

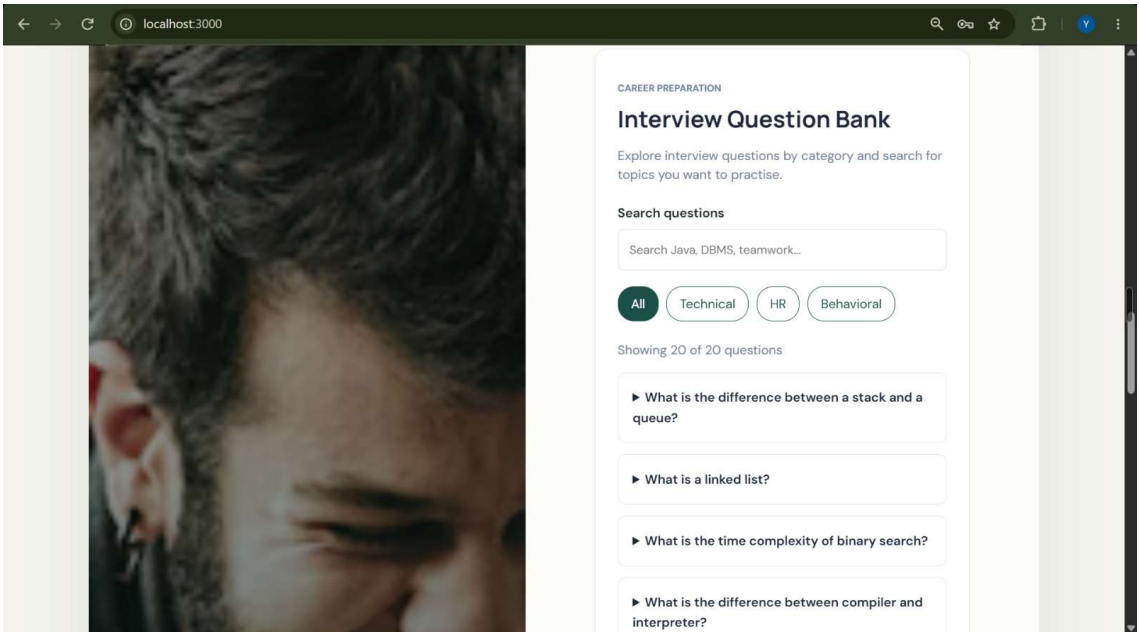

Evidence F014-07. Behavioral category combined with “teamwork”; one matching question displayed.

Evidence F014-08. Non-matching search term; zero results and empty-state message displayed.

F-014 - Interview Question Bank: manual browser evidence

Evidence F014-09. Search cleared and All selected; all 20 questions restored.

F-015 to F-017 - backend workflow test results

The full automated test suite completed with 124 passed, 0 failed and 0 skipped. Feature-specific test files were executed as part of this suite. The following are backend automated checks using controlled/mock database pools; they do not prove a complete live-MySQL or recruiter-browser workflow.

F-015 - Mock-interview booking and feedback

- Covered available-slot retrieval and student booking route behaviour, including authentication/role restrictions.
- Covered duplicate booking prevention, invalid booking inputs, invalid slot dates and unavailable slot identifiers.
- Covered administrator-only slot creation, booking review and feedback-route validation; duplicate slot creation is rejected.

Automated evidence: tests/mock-interviews.test.js. Live booking/feedback persistence against the isolated MySQL database was not demonstrated in this run.

F-016 - Recruiter listing create/publish

- Automated tests cover approved recruiter listing creation and publishing to OPEN status.
- Unapproved recruiter and wrong-role/unauthenticated access paths are covered; ownership checks prevent access to another recruiter's listing.
- Team finding reported on 10 November: recruiter request/approval exists, but recruiter login and recruiter management UI for publishing listings were not found.

Automated evidence: tests/recruiter-listings.test.js. Recruiter UI acceptance and student-visible OPEN listing workflow are BLOCKED / NOT TESTED pending team scope decision or UI availability.

F-017 - Applicant visibility and status tracker

- Automated tests cover own-listing applicant retrieval and denial of cross-recruiter access.
- Shortlisted/Rejected status updates, invalid decisions, missing/invalid IDs, malformed profile snapshots and concurrent update conflicts are exercised.
- The recruiter-facing applicant UI and the corresponding student tracker update were not manually demonstrated; the reported recruiter UI gap also affects this requirement.

Automated evidence: tests/recruiter-applicants.test.js. End-to-end UI validation remains BLOCKED / NOT TESTED pending team decision or UI availability.

Important interpretation

F-015 to F-017 backend tests passed where assertions were exercised. Do not mark the complete user-facing workflows as fully passed when live integration or required UI evidence is absent.

NF-002 - availability and operational monitoring

The local application and database readiness endpoint were checked before the monitoring run. The smoke-check script exercised six service and access checks; all returned their expected status.

Smoke check	Observed result
Server health endpoint	PASS - HTTP 200
Database readiness	PASS - HTTP 200
Web application root	PASS - HTTP 200
Student listings protected route	PASS - expected HTTP 401
Recruiter listings protected route	PASS - expected HTTP 401
Admin recruiter-requests protected route	PASS - expected HTTP 401

Uptime monitoring result

Metric	Observed result
Endpoint	http://localhost:3000/api/health/ready
Monitoring interval	10 seconds
Nominal run duration	2 minutes
Recorded checks	12
Successful responses	12 HTTP 200
Failed checks / incidents	0 / 0
Availability for recorded sample	100%

Raw evidence committed: docs/testing/evidence/uptime/uptime-2026-11-08.csv and docs/testing/evidence/uptime/uptime-summary-2026-11-08T06-12-35-619Z.md.

Scope limitation

This is a short local monitoring sample only. It is not evidence of continuous production uptime or a service-level availability period. Confirm whether the agreed evaluation window requires a longer run.

NF-003 - secure data, logging and configuration review

Review item	Observed evidence	Status
.env handling	git check-ignore identified .env in .gitignore; git ls-files .env returned no tracked file.	PASS
Production dependencies	npm audit --omit=dev reported 0 vulnerabilities.	PASS
Password hashing	Source review found bcrypt.hash(..., 12) and bcrypt.compare(...) in authentication flows.	PASS - source review
Sensitive logging	safeLog.js redacts email, bcrypt hash, JWT, Bearer token and password/OTP-style key/value patterns; targeted tests passed.	PASS - scoped tests
Security-event metadata	securityEvents.js applies an allowlist of metadata fields and rejects invalid event identifiers.	PASS - scoped tests
Database configuration	server/db.js obtains host, port, user, password and database from environment variables.	PASS - source review
Application HTTPS	ENABLE_HTTPS=false and ENFORCE_HTTPS=false in local environment.	NOT VERIFIED / PARTIAL
MySQL encrypted transport	No explicit SSL option in reviewed pool config; provider/server encryption not independently verified.	NOT VERIFIED
DB least privilege	No MySQL user-grants/privilege audit captured.	NOT TESTED

Evidence references: source review of server/auth.js, server/safeLog.js, server/securityEvents.js, server/db.js and server/enforceHttps.js/server/tls.js; terminal output for Git ignore, npm audit and configuration checks.

Conclusion

Password hashing, log redaction, environment-file exclusion and production dependency audit have supporting evidence. Encrypted transport and database privilege scope remain verification gaps. No end-to-end encrypted-transport claim is made.

SR-002 - role-based access control

A Student / Approved Recruiter / Admin permission matrix was prepared in docs/testing/SR-002-Permission-Matrix.md. The documented policy covers student listing and mock-interview routes, recruiter listing/applicant routes, recruiter approval gating and administrator-only routes.

Targeted validation	Result
Test files	auth-security.test.js; rbac-integration.test.js; rbac-routes.test.js; listings.test.js; mock-interviews.test.js; recruiter-listings.test.js; recruiter-applicants.test.js
Tests executed	57
Passed / failed / skipped	57 / 0 / 0
Coverage intent	Role matching, unauthenticated denial, approval gating, recruiter ownership and admin-only routes.

Scope limitation

This is a representative permission matrix and targeted route-role test set. Exhaustive live-database testing of every endpoint-role combination was not performed.

SR-004 - security event logging review

Targeted test files: tests/securityEvents.test.js, tests/safeLog.test.js and tests/rbac-routes.test.js.

Validation item	Observed result
Targeted tests	15 passed; 0 failed; 0 skipped.
Event structure	Logger emits timestamp, event identifier and allowlisted metadata.
Redaction/metadata filtering	Tests cover exclusion of passwords, tokens, emails and arbitrary fields; invalid event identifiers are rejected.
Source review	Recruiter/admin login events identified; student login/failure/lockout call sites inspected.
Open gap SR004-01	Admin recruiter approval/rejection route does not emit structured security events.
Limitation	Every student login/failure/lockout scenario was not independently exercised by the targeted suite.

SR-004 status: PARTIAL

SR004-01 remains OPEN for the implementation owner. After the route is updated, rerun approval/rejection event tests and verify that event metadata remains redacted.

Automated validation, coverage and outstanding actions

Validation	Observed result
Full automated suite	124 passed; 0 failed; 0 skipped (npm test).
Production build	PASS (npm run build; TypeScript + Vite).
SR-002 targeted suite	57 passed; 0 failed; 0 skipped.
SR-004 targeted suite	15 passed; 0 failed; 0 skipped.
Production dependency audit	0 vulnerabilities (npm audit --omit=dev).
Branch coverage	85.99% - 356/414 branches in selected 15-module scope.
Other selected-scope coverage	Statements/lines 75.11%; functions 88.46%.

Outstanding findings / next actions

ID / requirement	Status	Next action
SR004-01 / SR-004	OPEN	Implementation owner to emit approval/rejection security events; tester to retest after fix.
NF003-01 / NF-003	Verification gap	Confirm HTTPS/proxy configuration for the actual tested deployment.
NF003-02 / NF-003	Verification gap	Confirm MySQL/provider TLS and review database grants/least privilege.
F-015	Live integration not verified	Run booking, duplicate prevention and admin feedback against isolated MySQL if required.
F-016 / F-017	UI blocked / not tested	Team to decide scope/deviation or provide recruiter login, listing and applicant UI; then execute UI acceptance.
NF-002	Short sample only	Confirm whether 2-minute local sample meets the agreed evaluation window; extend if requested.
Shared team journeys / RTM	Team action	Share this report, provide requirement statuses to RTM owner, participate in shared E2E testing and sign-off.

Handoff

This report records it observes results and the stated limitations. Automated test success is presented as proof of complete end-to-end acceptance. The consolidated RTM owner should apply the team status convention and record accepted deviations after explicit team/evaluator acceptance.
